Subject: PAS Build Notice for 1/23/09

PAS Build

This is to inform you that on the evening of Friday January 23rd, a PAS build will be conducted beginning at 9 pm EST through 1 am EST Saturday January 24th. We anticipate that there will be no downtime or interruption to PAS during this activity.

With this PAS build, Change Order 3 will be implemented.

The following enhancements will be added to PAS as a result of Change Order 3.

- Additional Validations for Block Donations
- Modification to Part 1A report to include Part 1s for code **modification and code disconnect** requests
- New “Code Holder” column added to the Block Report on the National Pooling website
- Change in color of font for password reset screen for easier viewing
- Modification to Block Part 4 process to allow for submission of multiple Part 4s on one submission

Additional Validations for Block Donations

Two new validations were added to PAS to reduce the errors made on donations being submitted in PAS.

- For a block that is shown as retained, PAS will now validate that the OCN entered for the block donation matches the OCN shown in PAS for the block. If the OCN does not match, PAS will return an error message.
- For a block that does not currently exist in the system, PAS will validate that the OCN entered for the block donation matches the OCN on the code. If the OCN does not match, PAS will return an error message.
- PAS will validate that the rate center for the donated block matches the rate center of the code. If the rate center does not match, PAS will return an error message.

Modification to Part 1A report to include Part 1s for code modification and code disconnect requests

The **Part 1A** report has been renamed to the **Part 1/1A** Report and will now include code modification requests and code disconnect requests.

New “Code Holder” column added to the Block Report on National Pooling website

A new “Code Holder” column has been added to both the **Available Blocks** report and the **Assigned, Retained & Available Blocks** report, both found on the National Pooling website. The new column will show the OCN and company name of the code holder (as shown in the sample report below) for blocks that are in an available status.
